

American Osteopathic Association Research Grants Program

Grantor: American Osteopathic Association

Closes: 12/1/2010

Maximum: \$100,000.00

American Osteopathic Association Research Grants Program

The AOA recognizes the value of all areas of biomedical research. However, the resources and facilities of the profession are limited and direct research funding must focus on those areas of research that investigate the unique aspects of osteopathic medicine. The breadth of this research focus may include but is not limited to:

Mechanisms of Action of OMM/OMT

Clinical Efficacy of OMM/OMT

Inter- and Intra-rater reliability of palpatory assessment

Cost effectiveness of osteopathic health care

Osteopathic physician and patient interactions

Methods of teaching palpation and OMM/OMT

Grant applications are accepted on an annual basis and have a submission deadline of December 1; funding decisions approved by the AOA Board of Trustees at their Annual Meeting in July of the following year. The Council will recommend funding for research proposals with budgets up to \$50,000 per year; investigators should not expect to be funded for more than two years on a single project.
