

Orthopaedic Research and Education Foundation Resident Clinician Scientist Training Grant

Grantor: Orthopaedic Research and Education Foundation

Closes: 9/15/2010

Maximum: \$20,000.00

Orthopaedic Research and Education Foundation Resident Clinician Scientist Training Grant

The objective of the Resident Clinician Scientist Training Grant is to prepare residents for a career with research as a major component. Clinical relevance must be clearly noted in the abstract and specific aims sections, and be obvious from the title and the study design. Grants of up to \$20,000 for one year will be considered for orthopaedic surgery residents or fellows completing an orthopaedic fellowship in approved orthopaedic programs to cover research expenses, but not salary. The grantee is required to have a minimum of three months dedicated research time, with six months dedicated research time preferred, within the one-year grant period. The grantee's time commitment must be consistent with the grantee's role on the project, and must be justified. The work should clearly be achievable by the grantee as a free-standing project even when it is a part of a larger work, and it should potentially lead to publication with the grantee as an author. Both laboratory and clinical projects (e.g., outcome studies) are suitable, but in either case clinical relevance must be explicitly and clearly described.
