

Norman S. Coplon Extramural Grant Program

Grantor: Satellite Healthcare

Closes: 2/17/2012

Maximum: \$0.00

Norman S. Coplon Extramural Grant Program

Satellite Healthcare Funds Research To Improve the Lives of Patients with Chronic Kidney Disease (CKD)

Founded in 2000, the Norman S. Coplon Extramural Grant Program has become one of the nation's largest private research endowments for research into kidney disease and its treatment.

Each year, Satellite Healthcare supports researchers based in the US through Coplon Grants. Approximately a third of the grants are given for basic scientific renal research. The remaining grants are given for applied scientific renal research that can also be used in clinical practice today.

Encourages Young Researchers. Coplon Grants empower young promising researchers to seek ways to improve kidney health. These grants fund worthwhile proposals from passionate researchers early in their careers. In addition to advancing the knowledge and treatment of kidney disease, Satellite's support also helps these researchers build their resumes and complete the preliminary research needed for larger grants later in their careers.

Scientific Advisory Board Review. Satellite Healthcare's independent scientific advisory board convenes each year to review all submitted grant applications and recommend the best proposals for approval. These recommendations are then approved by the Satellite Healthcare Board of Directors.

Annual Symposium. Satellite Healthcare sponsors an annual symposium, where researchers supported by a Coplon Grant share findings, receive constructive feedback and participate in a free exchange of ideas with peers and members of the Scientific Advisory Board.

Coplon Grants Process

Proposals for the 2012 grant cycle should be submitted by February 17, 2012.

Three collated copies of the proposal (including, if necessary, three sets of any color illustrations and three sets of any literature/publications) must be submitted by mail. Applicants will be advised of the decision on their proposal by the end of June 2012.

Electronic submissions (followed by the requisite three copies) are permissible in order to meet the submission deadline.
