

Grants for Basic Science Research in the Field of Hand Surgery

Grantor: American Foundation for Surgery of the Hand/Orthopaedic Research and Education Foundation

Closes: 4/2/2012

Maximum: \$20,000.00

Grants for Basic Science Research in the Field of Hand Surgery

Funded by the American Foundation for Surgery of the Hand and OREF

The American Foundation for Surgery of the Hand awards grant funding for research projects related to the field of hand surgery to encourage young investigators. It is anticipated that the funding will enable these investigators to initiate projects that will lead to additional funding. There are no specific project guidelines within the framework of hand surgery. In the past, funding has been provided for a range of subjects. Seeds grants of up to \$20,000 are available annually.

All 2011 Research Grant proposals involving animals are required to have proof of submission to the Animal Research Review Board when the grant application is submitted. Documentation of IRB submission must be provided with the grant application. The Basic Science Research Committee will not review any study without proof that the IRB review process has been initiated. The deadline date for submission is April 2, 2012. Please prepare your proposal schedule accordingly.

For questions, please contact Sarah Meyer Hughes smeyerhughes@assh.org or 847-384-8300.
